Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Required fields are marked with an asterisk (*).

Owner *

👤 holykes ▾

Repository name *

Python916

Great repository names are short and memorable. Need inspiration? [Check out our repository name generator.](#)

Description (optional)

☒

Public

Anyone on the internet can see this repository. You choose who can commit.

☐

Private

You choose who can see and commit to this repository.

Initialize this repository with:

☐

Add a README file

This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore

.gitignore template: None ▾

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

Choose a license

License: None ▾

A license tells others what they can and can't do with your code. [Learn more about licenses.](#)

📘 You are creating a public repository in your personal account.

Set up GitHub Copilot

Use GitHub's AI pair programmer to autocomplete suggestions as you code.

[Get started with GitHub Copilot](#)

Add collaborators to this repository

Search for people using their GitHub username or email address.

[Invite collaborators](#)

Quick setup — if you've done this kind of thing before

 Set up in Desktop or HTTPS SSH <https://github.com/holykes/Python916.git> 

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# Python916" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M master
git remote add origin https://github.com/holykes/Python916.git
git push -u origin master
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/holykes/Python916.git
git branch -M master
git push -u origin master
```

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.

The screenshot shows the GitHub interface for a repository named 'pyRegex' under the user 'holykes'. The repository is private and has 1 branch, 0 tags, and 1 commit. A large orange arrow points from the bottom left towards the 'Settings' tab in the top navigation bar, with the text '삭제할 repository 클릭후 Settings 클릭' (Click the repository to be deleted, then click Settings) written diagonally across it. A red checkmark is placed above the 'Settings' tab. The right sidebar shows the 'About' section with no description, 0 stars, 1 watching, and 0 forks. The 'Releases' and 'Packages' sections also show no published items.

Unexpected bad things will happen if you don't read this!

- This will permanently delete the **holykes/pyRegex** repository, wiki, issues, comments, packages, secrets, workflow runs, and remove all collaborator associations.
- This will not change your billing plan. If you want to downgrade, you can do so in your Billing Settings.

I have read and understand these effects

Pushes

☐ Limit how many branches and tags can be updated in a single push Beta

Pushes will be rejected if they attempt to update more than this. [Learn more about this setting](#), and send us your [feedback](#).
